

Hyundai Trans Kazakhstan

Industrial Zone

138/5 7th Street, micro-district "Algabas"

Alatau district, Almaty city

050053, Kazakhstan

Letter of recommendation

To whom it may concern:

I am writing to recommend Rassul Zeinulla. I am a Senior Instrumentation & Automation Engineer at Hyundai Trans Kazakhstan, and I directly supervised Rassul during his on-site industrial internship at our plant.

From his first day, Rassul stood out for two reasons that matter most in engineering: strong fundamentals and initiative. He did not wait for direction — he actively asked for tasks, took ownership, and consistently aimed to understand not only what to do, but why it is done that way in real production. We intentionally assigned a wide range of activities to accelerate his growth, and he met that challenge with maturity and curiosity.

A core part of his internship was practical electrical engineering and automation work. He assembled a automation training stand based on our drawings and requirements, working through soldering, and component-level assembly. Importantly, when he encountered gaps in knowledge, he handled them in the right professional way: he asked targeted questions without hesitation, quickly applied it in practice.

He also participated in real troubleshooting alongside our engineers. For example, when an AGV robot charging station failed, he joined the diagnostic process on the shop floor and contributed to a successful restoration of operation. In addition, he demonstrated strong communication skills, regularly seeking feedback and coordinating effectively with colleagues.

His strongest performance was in the final project we assigned: building a conveyor-belt demonstration stand and implementing full automation using industrial hardware and software. He integrated proximity sensors and an encoder, developed control logic on a Siemens SIMATIC S7-300 PLC, and connected a real LS Electric HMI for operator control and visualization. He completed the work quickly and with high quality, finishing faster than previous interns while maintaining clean implementation and reliable functionality—an outcome that reflects both competence and disciplined execution.

Based on his performance at Hyundai Trans Kazakhstan, I consider Rassul a capable and highly motivated candidate with clear potential in robotics, industrial automation, and intelligent manufacturing. I strongly support his application and recommend him for admission.

Sincerely,

Mardan Kurmangali Salauatuly

Senior Instrumentation & Automation
